

PRIVATE AND CONFIDENTIAL MB/100/D MEASUREMENT CHART

Customer: _____

Date: _____

Important: it is essential that the measurements you record are as accurate as possible. A high degree of care and attention must be given to this task. Take plenty of time, repeating the measurement procedure until you are confident you are recording consistent and accurate values.

These belts are of a riveted construction and are not adjustable. Whilst small errors are not difficult to correct, major ones will invariably incur higher cost. An ordinary fabric or plastic tape measure of the type used for dressmaking is best for taking the measurements. You should aim at a tight rather than a loose fit, as experience shows a tight fit is far more comfortable and secure than a loose one.

The wearer should stand erect with their feet about twenty-four inches (60 cm) apart and hands placed on back of their head while all the measurements are taken. **This Belt is designed to fit around the waist and cannot be worn on the hips like some fashionable jeans, trousers and skirts. The main reference point for all measurements is the bottom edge of the waistband,** so it is of crucial importance that it is measured to fit the **waist**.

For the person with a fuller or waistless figure, the Belt will only be secure if the waistband is smaller than the circumference of the hips. Measurement **M** should be used to determine this, and the degree of discomfort that results. **All measurements must be taken next to the skin.**

Description		Indicate Centimetres or Inches. Centimetres / Inches	
A	Waist normal	A =	
B	Waist controlled (take a deep breath and pull in to make it as small as possible)	B =	
C	Penis length at full erection	C =	
D	Penis length fully relaxed	D =	
E	Penis circumference at full erection (mid point)	E =	
F	Penis circumference fully relaxed (mid point)	F =	
G	Waist to base of penis (top of)	G =	
I	Waist front between legs to anus	I =	
J	Waist front between legs and buttocks to rear waist	J =	
K	Waist front between legs and over buttocks to rear waist	Left =	
		Right =	
L	Waist rear between buttocks to anus	L =	
M	Waist measurement using one inch wide belt	M =	
N	Hips circumference	N =	
P	Height	P =	

Important notes regarding measurements please read before starting to measure.

1. Fasten around the waist a one inch (2.5 cm) wide belt making sure that it is horizontal and not dipped down in front. Make a mark (mark 1) on the centre front of the person being measured level with the underside of the belt. (Depending on anatomy this maybe above, below or on the belly button).
2. Adjust the belt to the smallest circumference at which you feel you could wear it and mark the position on the belt. Do not be tempted to settle for a nice comfortable fit, aim at a tight rather than a loose fit. Remove the belt, lay it out flat and measure from the end to the reference mark to determine the length.
3. Make marks again level with the underside of the belt at the centre back (mark 3) and at two points 3 inches (7.5cm) to the left and right of mark 3 (marks 4 & 5)
4. From the point marked in step 1 measure downward toward the start of the labia a distance equal to 1/8 of the measurement you got in step 2 and mark (mark 2) this point on the body with a felt tip marker or similar.
